

1. Which of the following are invalid identifiers in python? Total-sum
2. a sequence of one or more characters used to provide a name for a given program element? Identifier
3. Identify the invalid identifier below? 2017 discount
4. Are not allowed as part of an identifier? Spaces
5. Identifiers may contain letters and digits, but cannot begin with a digit ?
6. Which is not a reserved keyword in python? Insert
7. Identify the invalid keyword below? Until
8. Is an identifier that has predefined meaning? keyword
9. Bitwise operator gives 1 if one of the bit is zero and the other is 1? Xor
10. Guess the output of the following code? False
11. How many operands are there in the following arithmetic expression? 5
12. How many binary operators are there in the following arithmetic expression `_5+10/[23+56]`? 4
13. Which operator returns the remainder of the operator? %
14. A is a name that is associated with a value? Variable
15. Guess the output of the following expression `float [22//3+3/3]`? 8.0
16. What value does the following expression evaluate to? `2+9*((3*12)_8)/10`? 27.2
17. And are two ways to comment in python? Single line and multiline comments
18. Single line comments start with the symbol? #
19. Multiline comments can be done by adding on each end of the comment? `"""`(triple quote)
20. Python programs get structured through ? indentation
21. In python indentation is a and not a matter of style? Requirement
22. Which of the following is correct about python? All of the above
23. Which of the following function is used to read data from the keyboard? `Input()`
24. The ones complement of 60 is given by `_61`
25. The operator is and is not are ? identity operator
26. In python an identifier is ? case sensitive

27. Which of the following operator is truncation division operator? `//`
28. The expression that requires type conversion when evaluated is `4.7*6.3` ?
29. The operator that has the highest precedence is `**` ?
30. Expression that results in an error is `float("10.8")` ?
31. Which of the following expression is an example of type conversation ? `5.0+3`
32. What is output when the following statement is executed ? `new line`
33. What is output when the following statement is executed `0*d+0*e+0*f?` `42`
34. What is the output of `print (0.1+0.2==0.3)?` `false`
35. Which of the following is not a complex number? `1=complex(4,5)`
36. Guess the output of the expression `x=15 y=12 x&y?b1101`
37. Incorrect indentation results in ? `indentition error`
38. The function that converts an integer to a string of one character whose ASCII code is same as the integer is ? `chr(x)`
