

Multiple choice questions

1. _____ control statement repeatedly executes a set of statements? A
iterative

2. Deduce the output of the following code.

If false and false:

 Print("and operation")

Elif true or false:

 Print("or operation")

Else:

 Print("default case")

Output or operation

3. Predict the output of the following code?

l=1

While true:

 If i%2==0:

 Break

 Print(i)

 l+=1

A 1

4. Which keyword is used to take the control to the beginning of the loop? Continue

5. The step argument in range () function _____?

6. The symbol that is placed at the end of if condition is? :

7. What is the keyword that is used to come out of a loop only for that iteration?

Continue

8. Judge the output of the following code snippet?

For l in range(10):

 If l ==5

 Break

 Else:

 Print(i)

0 1 2 3 4

9. Predict the output of the following code snippet

While true:

 Print(true)

 Break true

10. The output of the below expression is `>>> 10 * (1/0)?` Zero division error
11. How many except statements can a try-except block have? More than zero
12. When will the else part of the try-except-else be executed? When no exception occurs
13. When is the finally block executed? Always
14. The keyword that is not used as an exception handling in python? Accept
15. An exception is? A special function
16. The set of statements that will be executed whether an exception is thrown or not?
17. Predict the output of the following code snippet?
- ```
While true
 Print("hello word")
 syntax
```
18. Gauge the output of the following statement? Value error
19. The error that is not a standard exception in python? Assignment error
20. The function that generates a sequence of numbers which can be iterated through using for loop? Range()
21. What is the output of the following code snippet?
- ```
X = 'abcd'
For I in x:
    Print(i)    abcd
```
22. The function of while loop is? Repeat a chunk of code until a condition is true

Mohammad Reze Tawana
